

## Topic 17: False Discovery Rate (FDR) and Knockoffs

by Sai Zhang

**Key points:** Constructing knockoff variables to control FDR when estimating regression coefficients.

**Disclaimer:** *The note is built on Prof. [Jinchi Lv](#)'s lectures of the course at USC, DSO 607, High-Dimensional Statistics and Big Data Problems.*

## 17.1 Motivation

Consider the classical linear regression setting

$$\mathbf{y} = \mathbf{X}\boldsymbol{\beta} + \boldsymbol{\epsilon}$$

where  $\boldsymbol{\beta} \in \mathbb{R}^p$

[Candès et al. \(2018\)](#)
