Disclaimer: These notes are written by Sai Zhang ([email me](#) or check my [Github page](#)). The main reference for this topic is *Armstrong, Kolesár, and Kwon (2020)*, I thank Prof. Armstrong for his valuable advice.

3.1 Finite Sample Bias-Variance Tradeoffs

3.1.1 Setup

Consider the fixed design regression model

$$y_i = w_i \beta(z_i) + h(z_i) + \epsilon_i \quad (3.1)$$

where

- w_i, z_i are treated as fixed
- ϵ_i is independent, with $\mathbb{E}[\epsilon_i] = 0, \mathbb{E}[\epsilon_i^2] = \sigma_i^2$
